THOUGHTFUL BREEDING

Raised with love. Placed with care.

We breed healthy, well-socialised dogs from health-tested parents with verified pedigrees. Every puppy comes with lifetime breeder support.

The problem with breeding administration

Running a reputable breeding programme is demanding work. Between health testing, pedigree documentation, client communication, waitlist management, and post-placement support, breeders spend more time on administration than on what they love — the dogs.

Most breeders rely on spreadsheets, email chains, and social media DMs. This creates gaps: applicants fall through the cracks, documents get lost, and the breeder's professional brand is invisible.

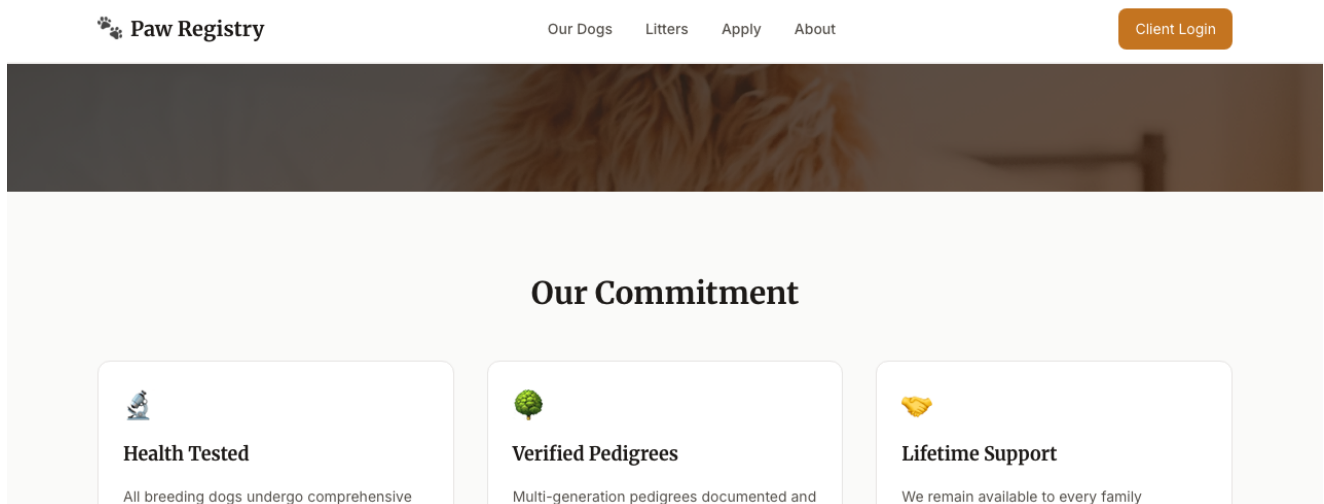

Paw Registry changes that.

A fully integrated, custom-branded platform that handles every stage of a puppy's journey — from the first enquiry through to placement and beyond.

One platform, everything included Dogs, litters, clients, documents, emails, and updates — all connected and talking to each other.	Your brand, your way Customise your website copy, colours, dog profiles, email templates, and document checklists to match your programme's identity.	Save hours every week Automated emails on stage changes, drag-and-drop waitlist ordering, and a self-serve client portal reduce back-and-forth by up to 80%.
---	---	--

Your public website — live on day one

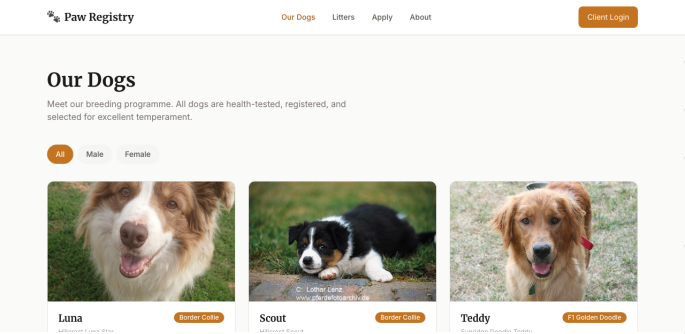

Every Paw Registry installation includes a polished public website where potential clients can browse your breeding dogs, view current and upcoming litters, read about your programme, and submit a detailed puppy application — all without any coding.

Homepage — 'Our Commitment' section showcasing health testing, verified pedigrees, and lifetime support

Feature overview

Dog profiles & breeding programme

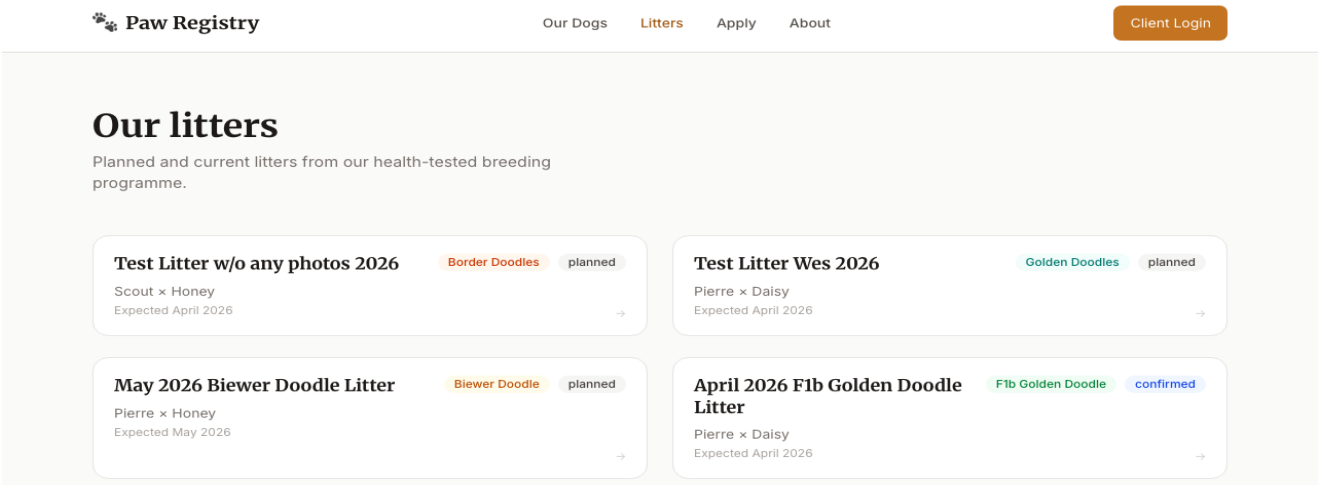

Every breeding dog gets a rich, public-facing profile:

- High-resolution photo gallery
- Registered name, call name, breed, colour & sex
- OFA health results — hips, elbows, eyes, heart, DNA panels
- Multi-generation pedigree tree (up to 4 generations)
- Microchip & kennel club registration numbers
- Status: active, retired, or deceased

Clients can filter by sex and explore each dog in detail before they apply — building trust before any conversation begins.

Litter management

Track every litter from planning through to completion. Each litter has its own page with sire & dam details, puppy tracking (by collar colour), photo gallery, and availability count.

Litters page — showing planned, confirmed, weaning, and born litters with breed tags and availability

Litter status progression:

Client lifecycle management

5-step puppy application

Prospective clients complete a thorough application that captures everything you need to make the right match:

- Personal details & contact info
- Home & life situation — housing type, garden, hours alone
- Experience with dogs & previous breeds owned
- Preferences — breed, sex, colour, timeframe
- Deposit intent & contract agreement

All data is stored in a structured format, searchable and reviewable in your admin dashboard. No more reading through email threads to remember what a family said.

7-stage client pipeline

Every applicant moves through a clearly defined pipeline. Stage changes trigger automatic, customisable emails — keeping clients informed without any manual work.

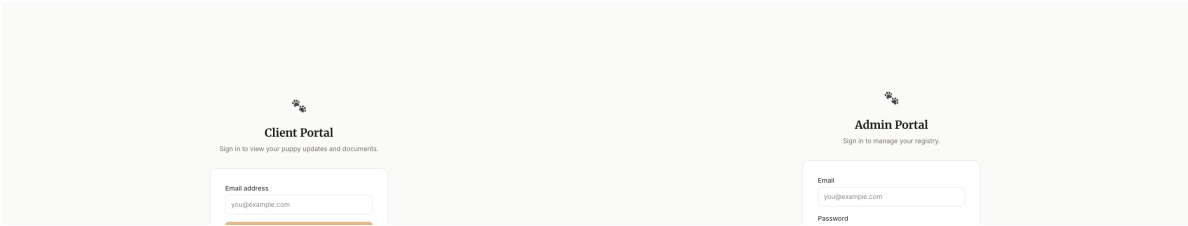

Enquired	Application received
Approved	Admin approves application
Waitlisted	All documents submitted
Placed	Litter assigned
Match Requested	Awaiting puppy selection
Matched	Puppy selected by client
Matched & Paid	Final payment received

Each stage transition triggers a fully customisable email to the client. Edit the email template (include a link to the client portal link, litter name) from the admin dashboard. Enable or disable any trigger.

The client experience

Approved applicants receive a magic-link email to access their personal client portal — no passwords, no app to install. Just a link that opens their dashboard.

Dashboard & status Clients see exactly where they are in the process, with a plain-English description of their current stage and next steps.	Document checklist Admin uploads required documents (contracts, care guides, health records). Clients download, sign, and re-upload — all tracked with a progress bar.	Puppy updates Week-by-week journal posts with photos, targeted to the client's litter or specific puppy. Keeps families engaged from birth to go-home day.
Litter & puppy detail Once placed, clients can view their litter's page including puppy photos, collar colours, and available puppies for selection.	Go-home checklist A six-item checklist (vet check, microchip, contract, deposit, balance, puppy pack) with progress tracking and go-home date display.

The admin dashboard

The breeder's command centre. Every part of your programme is manageable from a single, clean interface — no spreadsheets, no email folders, no sticky notes.

Dogs & health records Add, edit, and archive breeding dogs. Attach OFA certificates, DNA panel results, and vet records. Manage photo galleries with drag-and-drop ordering. Set sire/dam links for automatic pedigree generation.	Litter management Create litters by selecting sire & dam. Track status from planned to completed. Add individual puppies with collar colour coding. Upload up to 30 litter photos. Toggle public/private visibility per litter.
Waitlist & client ordering Drag-and-drop to reorder your waitlist. Separate tables for clients with deposit vs. without — so you always know who is most committed. One-click deposit status updates.	Document templates Upload contract templates, care guides, go-home packs, and invoices. Mark templates active to push them to client checklists automatically.
Email templates Edit the subject and body of every automated email. Use template variables like {{first_name}}, {{portal_link}}, {{litter_name}}. Enable or disable any trigger. Full send history logged per client.	Updates & puppy journal Post weekly updates targeted to a litter, puppy, or specific client. Attach up to three photos per post. Publish immediately or save as draft.
Puppy matching Assign a client to a litter, then request a match when puppies are ready. The client selects their puppy via the portal. System auto-transitions stages and notifies both parties.	Admin management Invite additional admins by email. Remove access instantly. Multiple admins can manage the programme simultaneously.

Tailored to your programme

Paw Registry is not a generic off-the-shelf product. Every installation is configured specifically for the breeder's programme — from brand identity to workflow automation.

Brand & identity

- Your kennel name, logo, and tagline throughout the site
- Custom colour palette matching your existing brand
- Serif + sans-serif font pairing for an elegant, professional look
- Footer with your contact details and social links

Dog & breed configuration

- Any breed or cross-breed — the system is breed-agnostic
- Custom breed labels per litter (e.g. 'F1b Golden Doodle', 'Border Doodle')
- Health test types configurable to your breed's standard requirements
- Pedigree depth adjustable per breeding line

Application form

- Questions can be tailored to your specific requirements
- Country default pre-filled (e.g. ZA for South Africa)
- Deposit amount set per litter
- Contract agreement checkbox linked to your specific contract

Email templates

- Every automated email written in your voice
- Custom subject lines and body copy per trigger
- Template variables include your portal URL and programme name
- Sender name and reply-to address set to your details

Document workflow

- Upload your own contract PDF as a template
- Require any combination of documents before waitlisting
- Custom document categories (contracts, health, care, invoices)
- Document checklist items shown in your preferred order

Waitlist rules

- Define your own deposit amount and deposit status criteria
- Separate waitlist tables for deposited vs. non-deposited clients
- Priority ordering fully in your control via drag-and-drop
- Stage names and email copy reflect your terminology

Every Paw Registry installation is set up and maintained by the development team — you never need to touch code. Changes to copy, colours, templates, and configuration are handled as part of the ongoing service.

Why Paw Registry?

Purpose-built for breeders Unlike generic CRMs or spreadsheet templates, Paw Registry is designed from the ground up around the specific workflows of a responsible breeding programme. Every feature reflects how thoughtful breeders actually work.	End-to-end type safety Built with TypeScript throughout — frontend, backend, and database schema. This means fewer bugs, faster development, and a system that stays reliable as your programme grows.
Clients feel looked after The client portal gives applicants a professional, reassuring experience from first application through to puppy placement. They can track their own progress, access documents, and read puppy updates — without needing to message you constantly.	No data silos Everything is connected. A dog links to its litters. A litter links to its puppies and clients. A client links to their documents, emails, and matched puppy. Nothing lives in a separate spreadsheet.
Grows with your programme Whether you place 4 puppies a year or 40, Paw Registry scales with you. Add new breeds, new litters, new admins, and new document types without restructuring anything.	Secure by design Authentication via Supabase magic links (no passwords to leak). Admin access controlled by server-side UUID validation. Client data isolated per user. Files stored in secure cloud buckets with signed URLs.
Mobile-friendly The public site, client portal, and admin dashboard all work on mobile. Clients can upload documents from their phone. You can check your waitlist on the go.	Backed by modern infrastructure Deployed on Railway with Supabase Postgres and file storage. Production-grade reliability with zero maintenance burden on the breeder.

Paw Registry is available as a fully managed, custom-configured installation for reputable breeders. Get in touch to discuss your programme and see a live demonstration tailored to your breed.
